

Python – Name

Purpose

This lab was designed to teach you how to read data from a user and store/output that data.

Description

Write a program to that prompts the user to input their age, first and last name.

The first prompt should state:

Please input your first name:

The second prompt should state:

Please input your last name:

The third prompt should state:

Please input your age:

After accepting the inputs, your program should output the input in the form *last name, first name*. Print the types of the variables on 3 separate lines.

Program Shell

Create a file called name.py

Sample Execution

```
Please input your first name: John
Please input your last name: Hancock
Please input your age: 18

Your name is Hancock, John.
You are 18 years old.
In 2 years, you'll be 20 years old.
<class 'str'>
<class 'str'>
<class 'int'>
```
